

# STKI Israeli IT Market Study & Trends 2024

Strategy, Project & Product mng,  
Testing, and Intelligent Automation

**Galit Fein**  
**EVP @ STKI**

# ADENDA

## Strategy, Project & Product

1 Deliver the Value

2 Transparency & Alignment

3 Streamlining of Demand Mng

4 More (Digital)Dev = Product Mng

5 PPM Solutions Trends

## QA & Testing (Automation) Trends

1 More dev = more testing

2 More digital dev = More Testing Automation

3 Why Testing Automation

4 Automation Center of Excellence

5 AI in Testing Automation

## Business Process Automation and Re-Engineering

1 RPA goes AI

2 End-to-end Process Automation

3 Automation CoE

**#1**

**Deliver  
the Value**

# Questions with NO good answers (YET)

1.

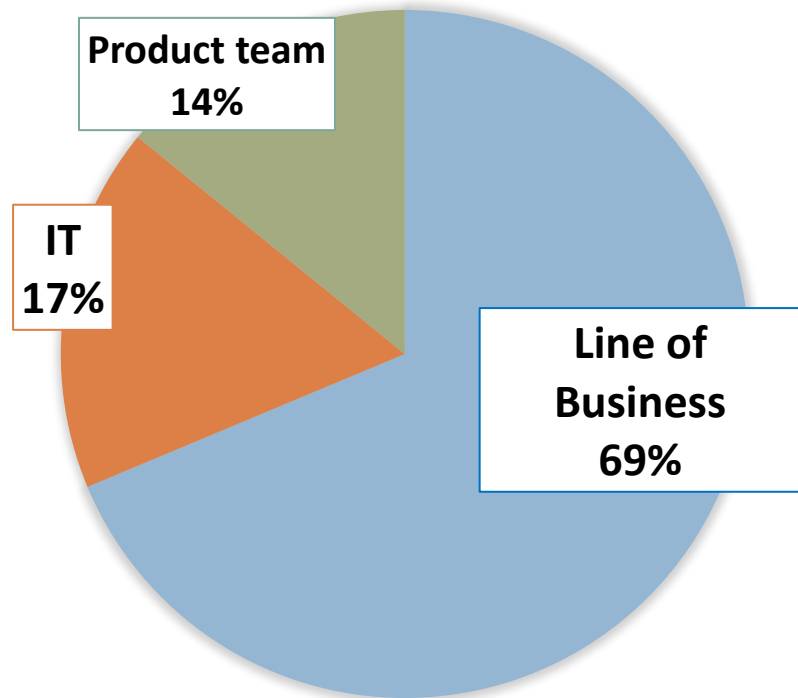

Who is responsible for defining the value, powered by technology, for the customers?

2.

Do you know how to measure it?

# מי אחראי על הגדרת הערך, מבוסס על טכנולוגיה, עבור הלקוחות? (במונחים של הצלחה עסקית)?

Most of the time, product requirements (the value) are defined by business units and transferred from there to the IT through referents

# כיצד כיום נמדדת הצלחה של פרויקט/ יוזמה טכנולוגית

Focus on Deliver Value

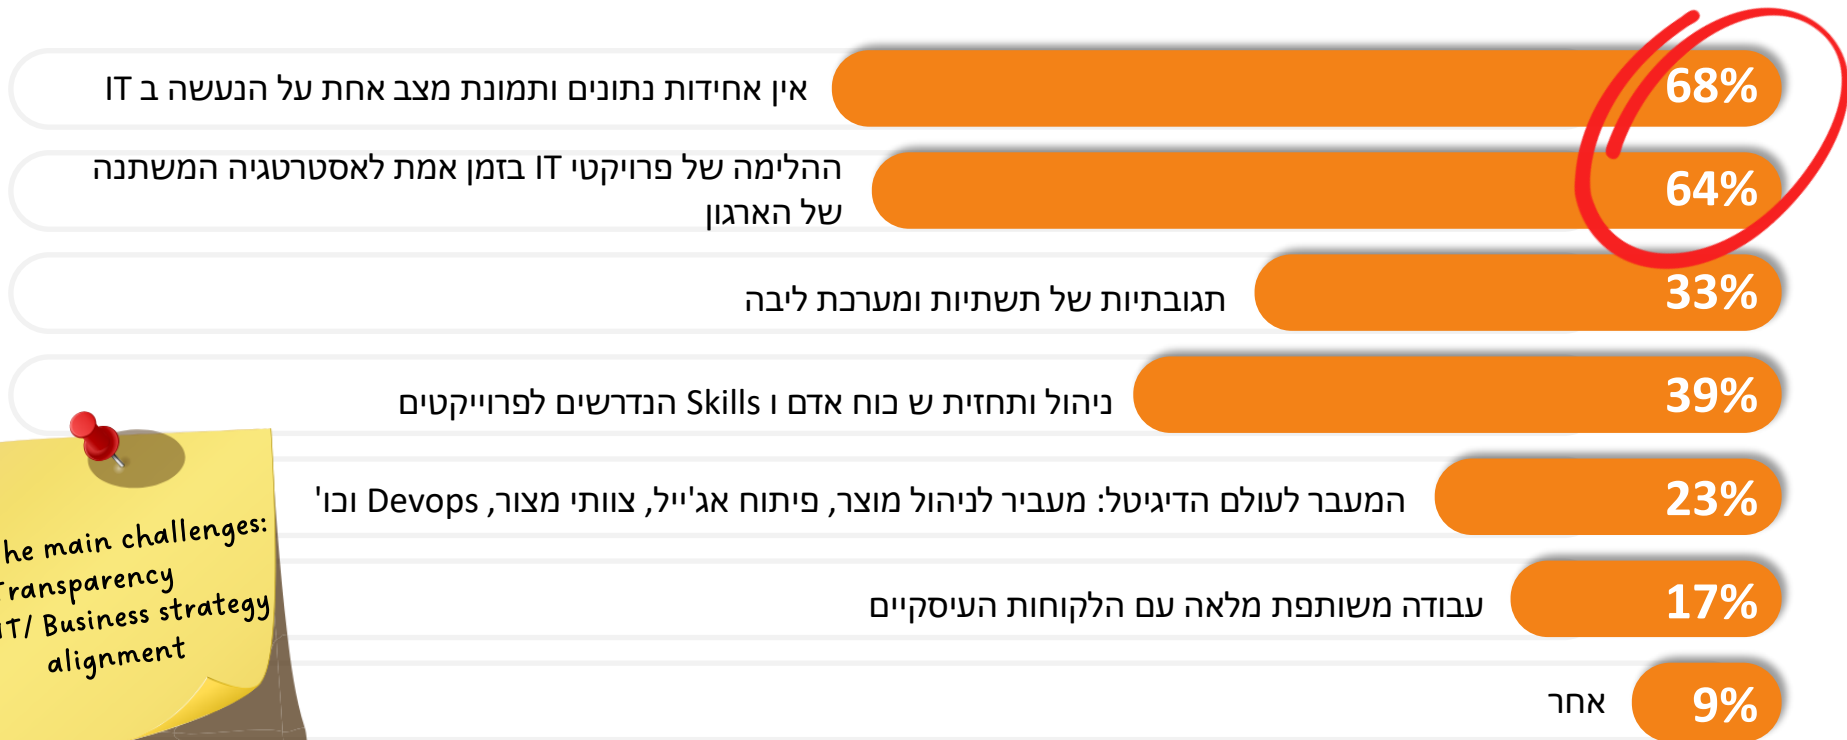

A background image showing raindrops on a window pane. The rain is falling vertically, creating streaks and droplets. The colors are muted, with some reflections of light. The overall tone is somewhat somber and reflective.

# #2

# Looking for Transparency & Alignment

Since 2003

# מהו האתגר הגדול ביותר בעולמות של OCIO / ניהול מטה IT היום בארגונכם?

The main challenges:  
Transparency  
IT/ Business strategy  
alignment

# Better alignment of IT portfolio with (changing) strategic objectives

## BETTER ALIGNMENT TO:

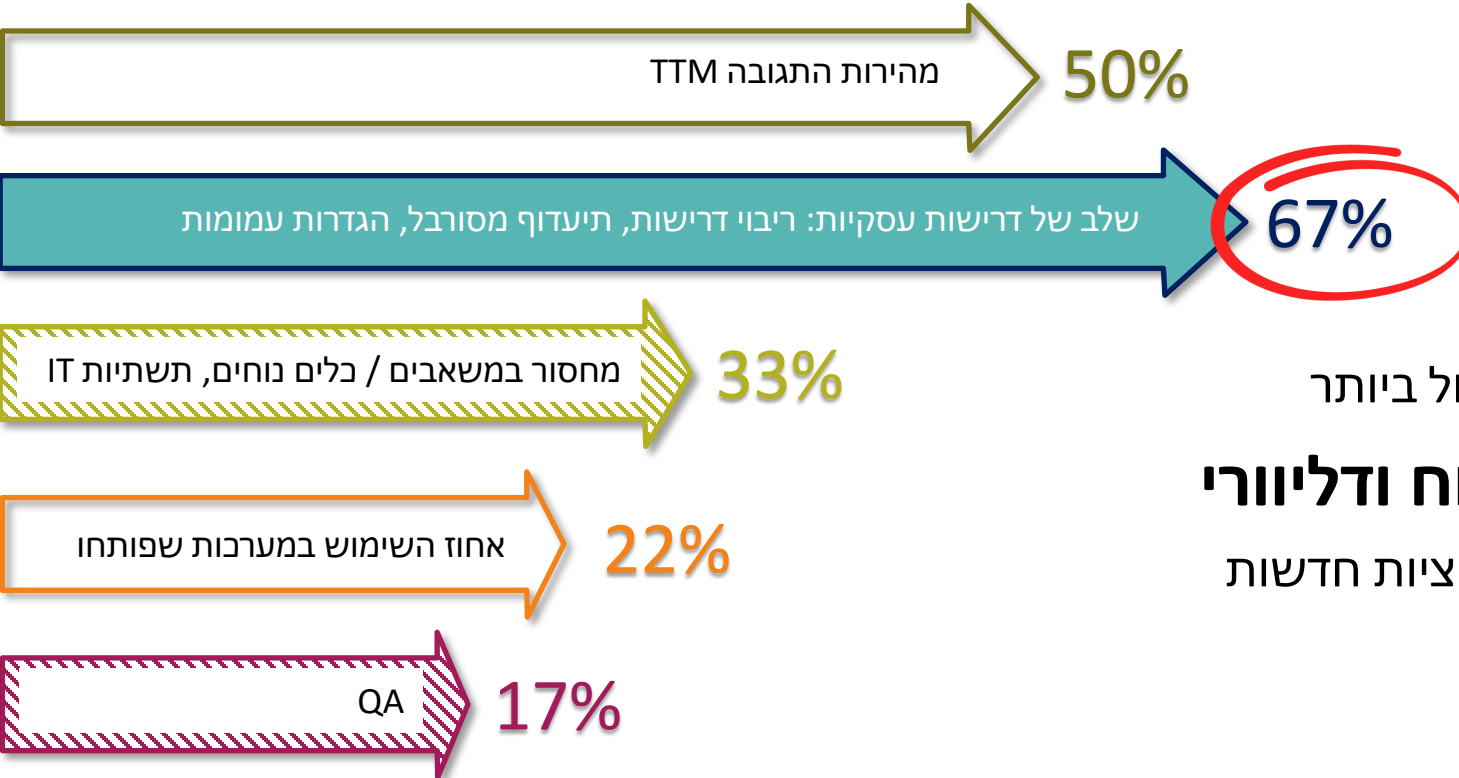

- strategic planning
- resource and budget planning
- individual tasks mng
- Business Units demand mng – a flood of (not always well-defined) business requirements
- tech projects risk mng

A close-up, high-speed photograph of a waterfall. The water is falling in many thin, parallel streams, creating a dense curtain of water. The water is clear and bright, with some white foam at the bottom. The background is dark and out of focus, showing some green foliage.

**#3**

**Streamlining of Demand Mng**

מהו **האתגר** הגדול ביותר  
**בתחום הפיתוח ודליוורי**  
של מערכות ואפליקציות חדשות  
בארגונכם?

Source: STKI 2024

In most orgs, demand mng, prioritization, cost estimation are **extremely resource and time-consuming processes**

503

### Automation:

- Automation of manual tasks to collect data and present a holistic view and insights at any given moment

### Standardization:

- Standardize demand-related activities (eg, planning, prioritization, modeling)
- Improve efficiency and consistency

### Requirement for BI and data analytics tools:

- Leverage data analysis tools
- Identify patterns and trends in incoming demand
- Improve decision making

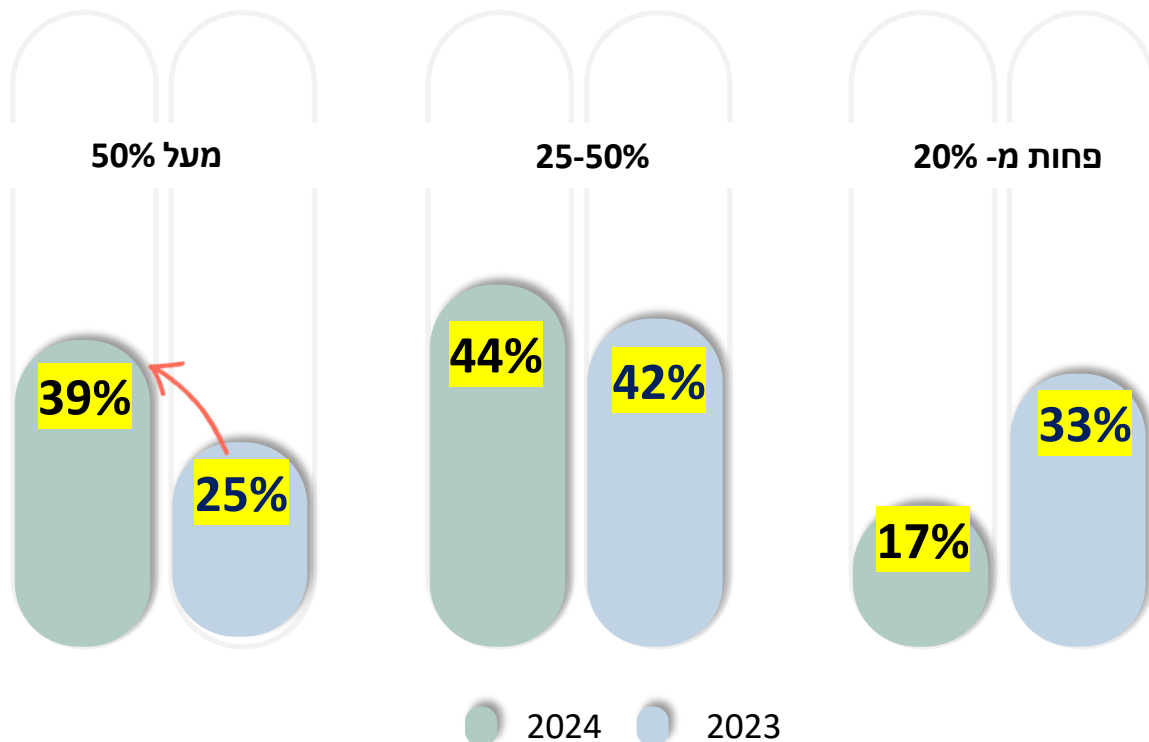

# #4

More Dev =  
More Digital Dev =  
More Product Mng

# מהו אחוז פיתוחי הדיגיטל מתוך כלל הפיתוחים?

Orgs are running increasing nu of digital, interdependent projects, written with the newest technology

Source: STKI 2024

# Digital Dev = Product mng

A blurred background image of a modern office environment. Several people are seated at desks, working on laptops. The scene is brightly lit, likely from large windows, creating a bokeh effect with light spots. The overall atmosphere is professional and collaborative.

- **Product Team collaboration and Business owners' engagement**
- Team involvement in prioritizing projects - shared services mng (infra, security, QA)

# Hybrid SW Development Models

## Waterfall

## Agile

- In almost all organizations, Agile and Waterfall development management models coexist
- In addition, there are more and more types of portfolios (products, projects, services, applications, IT systems, etc.), which require different mng methodologies depending on each case

# #5

## WE NEED BETTER PPM SOLUTIONS!

# האם אתם מרוצים מכלי ה־PPM הנמצא בארגונכם?

Source: STKI 2024

# האם אתם מרוצים מכלי ה-PPM הנמצא בארגונכם?

Why:

50%

לא מצליחים לקבל אמת אחת

50%

רובסטי מדי, אנחנו עובדים בשבילו

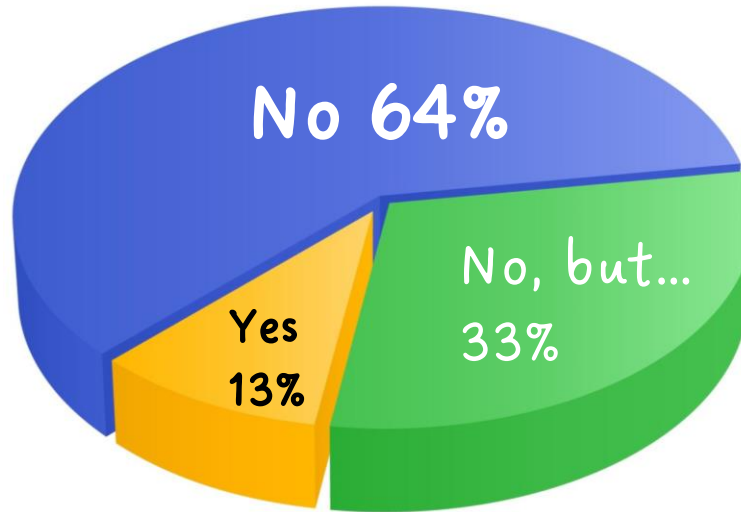

0%

יקר מדי

"זה לא בעיה טכנולוגית - הטמעת PPM מצליחה, כאשר הנהלה מחויבת לתהליך, והיא נכשלת שהנהלת הארגון לא שמה על זה מספיק דגש, משאבים, ומחויבות" איציק לייבוביץ, שופרסל OCIO

Source: STKI 2024

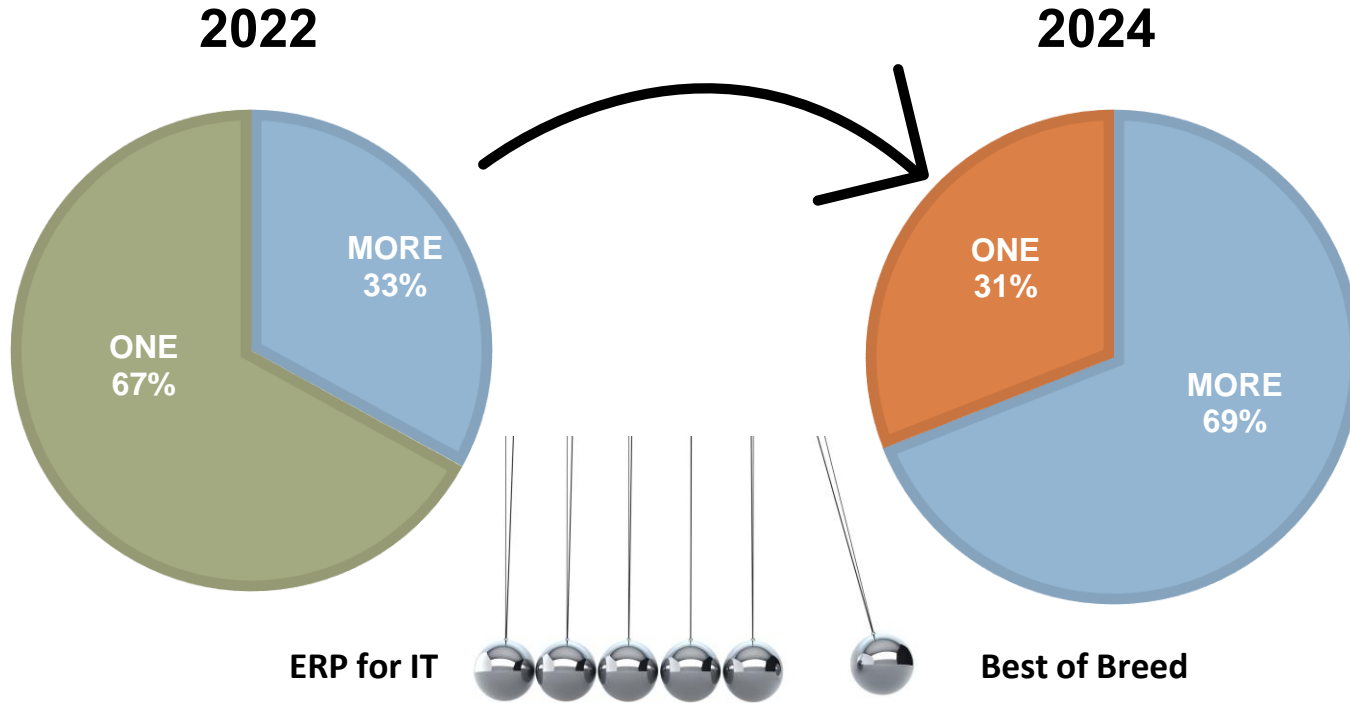

# האם אתם עומדים להחליף השנה את כלי ה-PPM הקיים בארגונכם לפתרון אחר?

we will add a  
complementary  
solution

# Do you use one or more tools for the PPM?

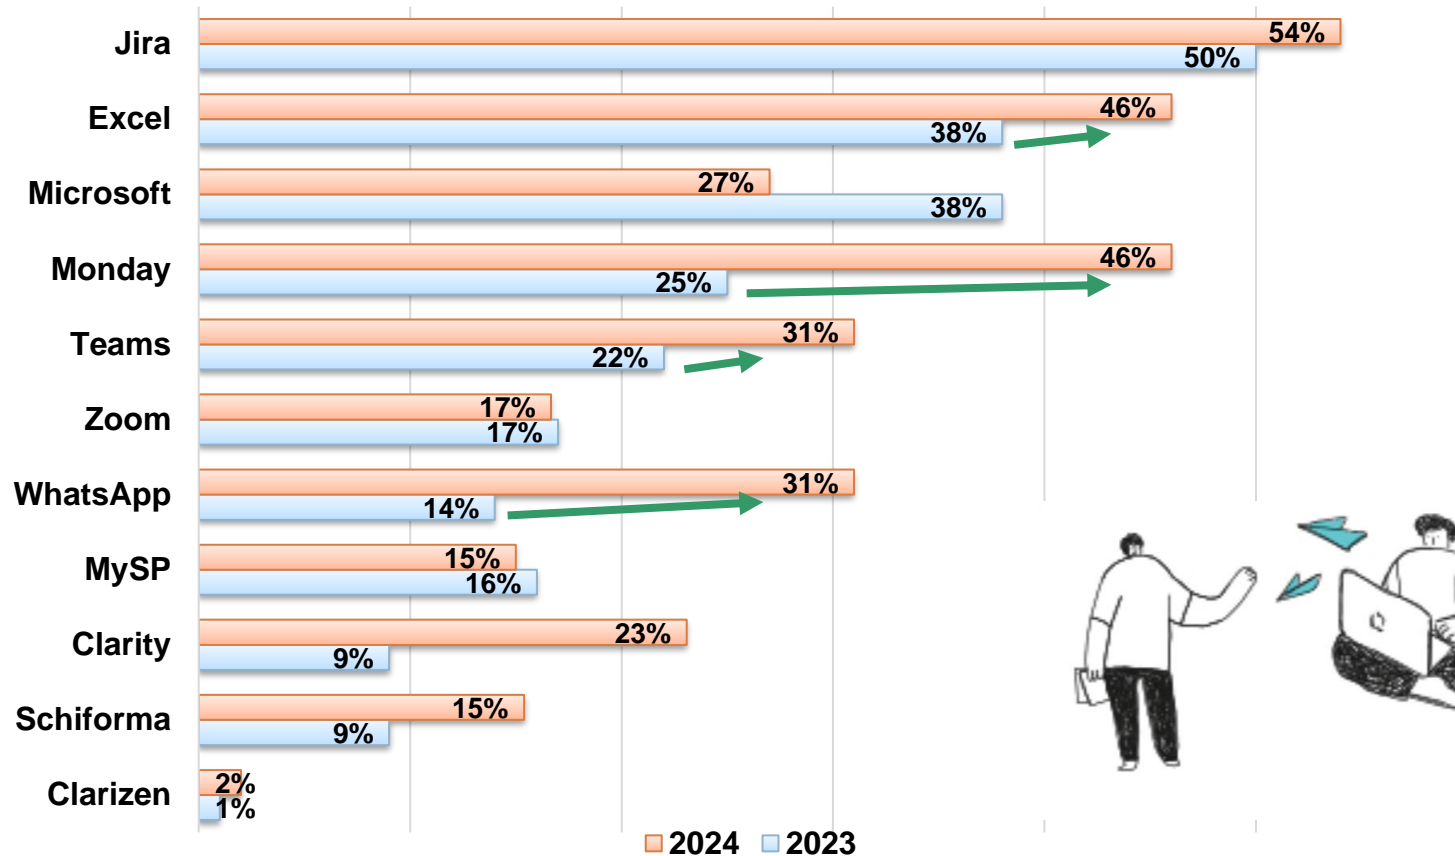

ERP for IT

Best of Breed

Source: STKI 2024

# באילו מוצרים עובד ארגוןך כיום לטובת ה־MSP?

- I. If your developers love **JIRA** – **keep working with it**. You will find plenty of Jira add-ons on its marketplace
- II. In step 2, you can add Monday for a better Business-Strategy-Development connectiob

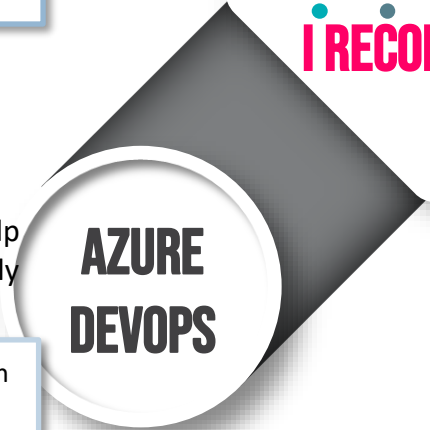

**Pros:** one well-integrated platform  
**Cons:** UX. Jira isn't natural for business people

**Pros:** UX, easy to use, IT/ business alignment  
**Cons:** performance issues in enterprise scale, lack of depth to the developers

**PPM**  
**I RECOMMEND**

If you work well with Azure DevOps - you can **check out the "new" tools**, such as Monday, Trello. LCDP that help teams (sales, OCIO, procurement) to easily build custom apps & WFs

**Pros:** Easy start, LoB specific need solution  
**Cons:** Integration to ALM

**Pros:** It's a small experiment, NOT a BIG project  
**Cons:** you are still stuck with your current PPM.

Orgs that started working with PPM on Monday love the tool - mainly thanks to its great connection between projects and business, business language, and UX. Business people love it

If you have a big PPM implementation in place, that works, but not to your full satisfaction – **keep using it** Start with the most painful workflow on LCDP, if it works – you found yourself a new PPM solution , if not – you can check alternative PPM solutions

Many orgs are not very happy with their current PPM installation.  
But they also don't want to throw away the current tools in which so much has been invested.

They are beginning to understand that the perfect solution - that can manage every aspect of PM in an enterprise (budget, hours, tasks, risk, etc) - doesn't exist, and they are ready to invest in additional tools

## A word to Vendors that deliver PPM:

**1**

Start with **consulting and reprocessing**.  
Orgs haven't looked at their processes for several decades. Most problems can be solved with correct work practices **and better (current) solution implementation**

**2**

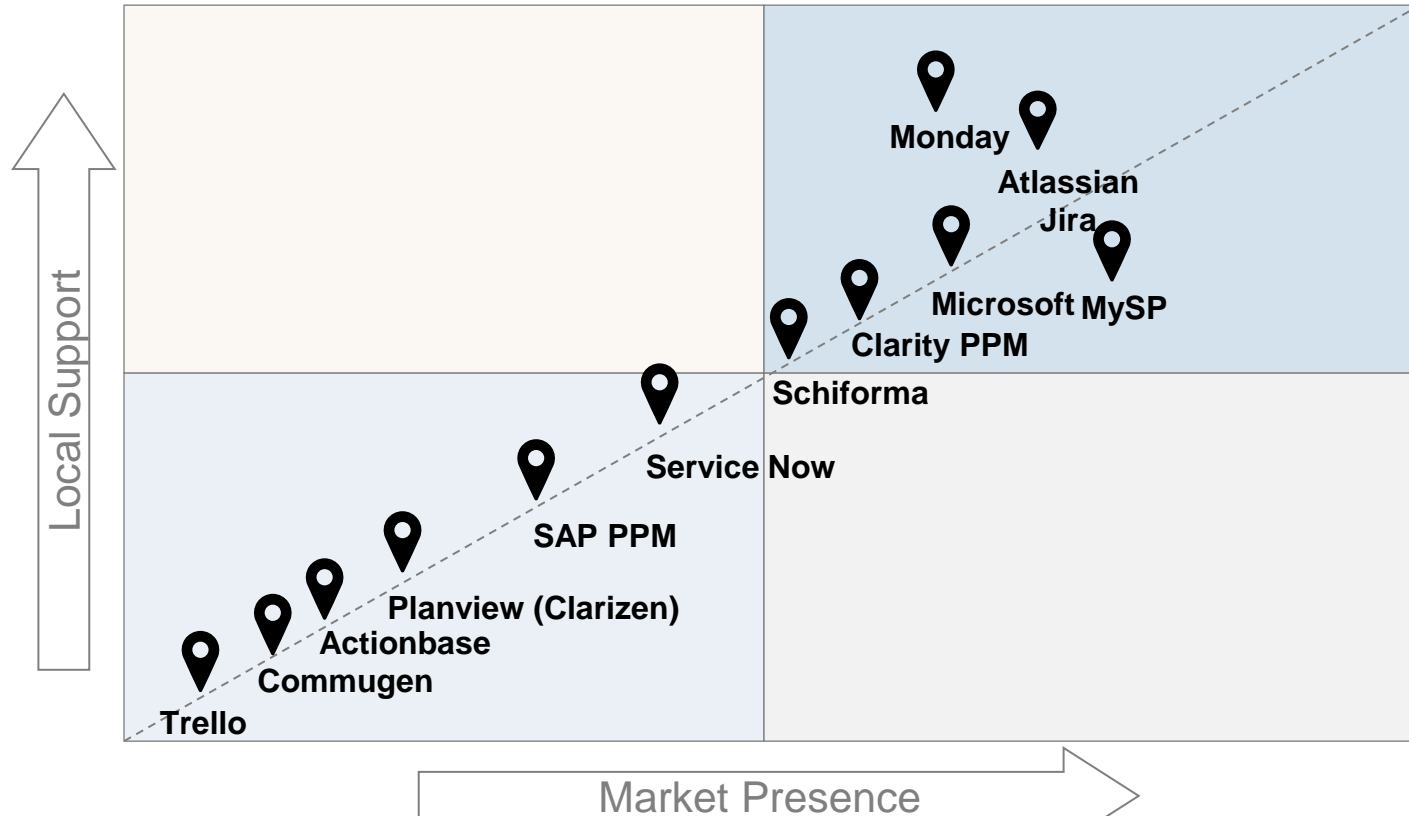

An area that still won't have a solution after process optimization- you can offer a **pinpoint tool**

**3**

We believe that vendors should **separate between PPM consulting and tool implementation** and become tool-agnostic

# PPM Israeli Market Positioning– 2024

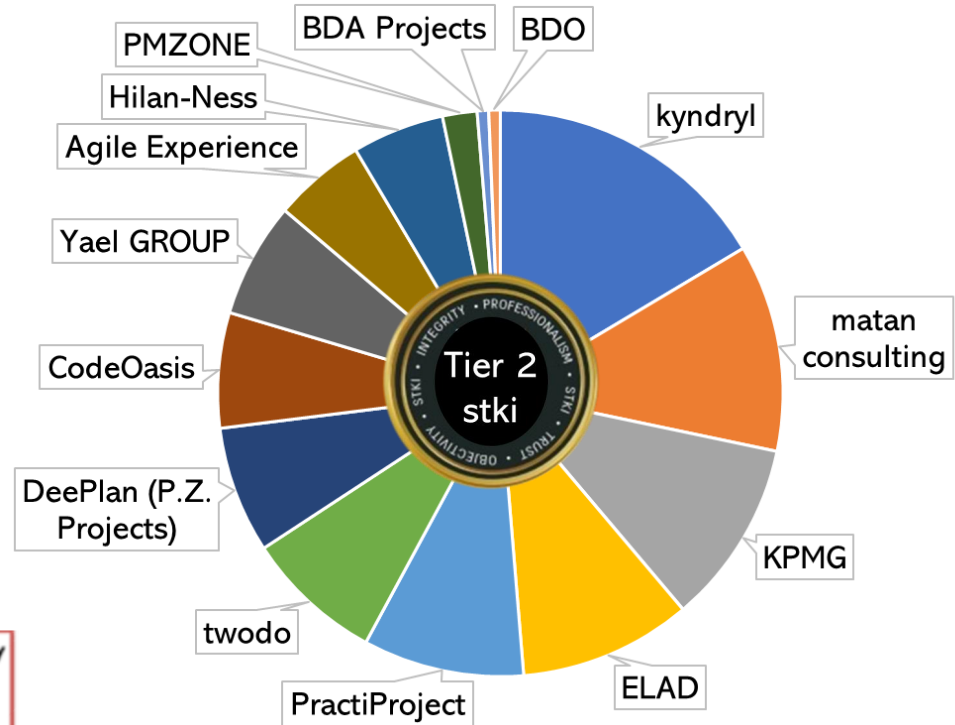

Vendor to watch:  
Zoho

# PPM & Project Management Implementation

We rank VENDORS by  
**REVENUE**  
and  
**CLIENT MINDSHARE**

# Testing Trends

# #1

## more dev = more testing

Many more small projects, new tech, new environments, more APIs, more development in general

# מהו היחס של מפתח : בודק בארגון?

Source: STKI 2024

1:10 - מחצית 2023  
1:5 - מחצית 2024  
פיתוח דיגטלי:  
הרוב 1:4 / 1:3

# #2

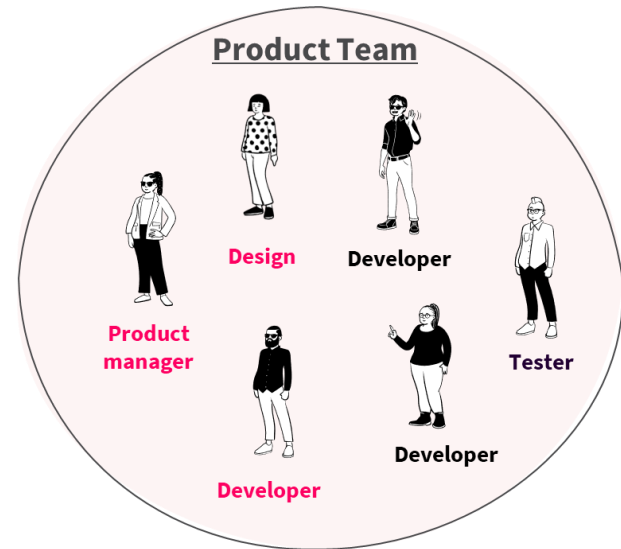

**more digital development =  
more testing automation**

**Digital development means Product management**

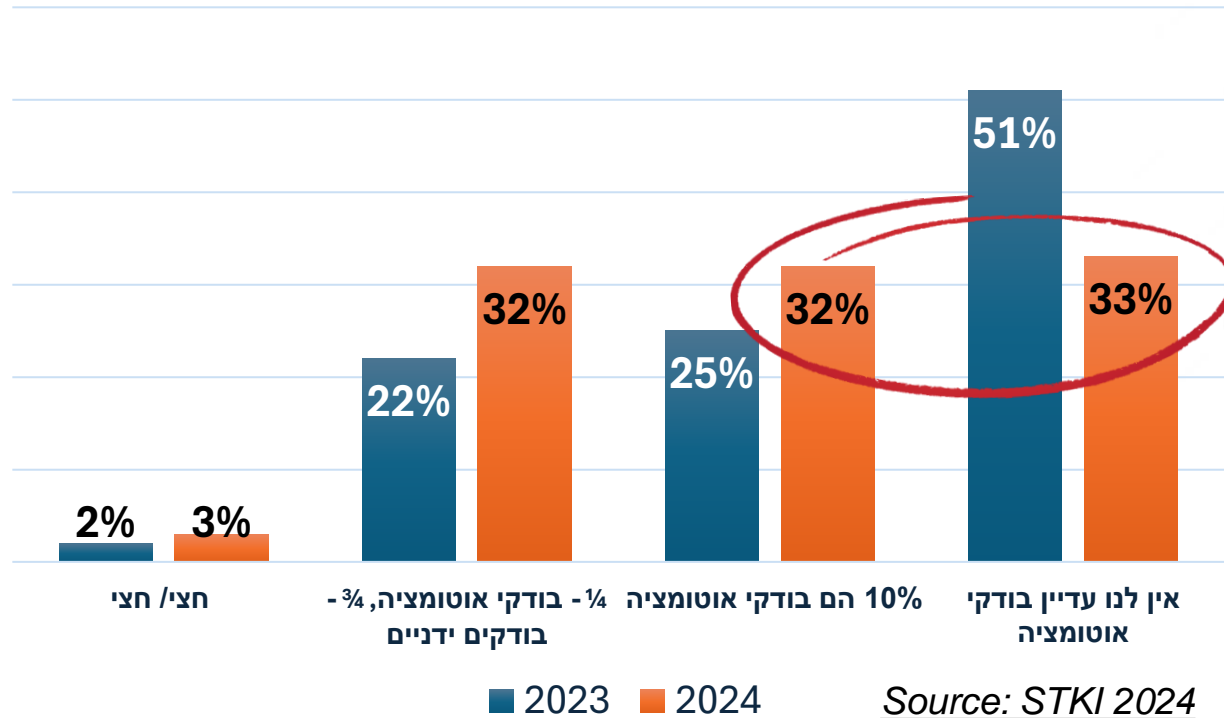

# Testing automation is **a must** in Product mng

Digital dev = agile dev and product mng

Product mng = small multidisciplinary  
product teams, consisting of both  
developers and testers

# מהו אחוז בודקים ידניים לעומת בודקי אוטומציה בארגון?

For 65% of the orgs, automation testers make up less than 10% of the org's total testers

# #3

## WHY TESTING AUTOMATION?

**For Better and Faster Coverage**

# מה היא הסיבה העיקרית לרצון להכנסת אוטומציה בארגוןך

Source: STKI 2024

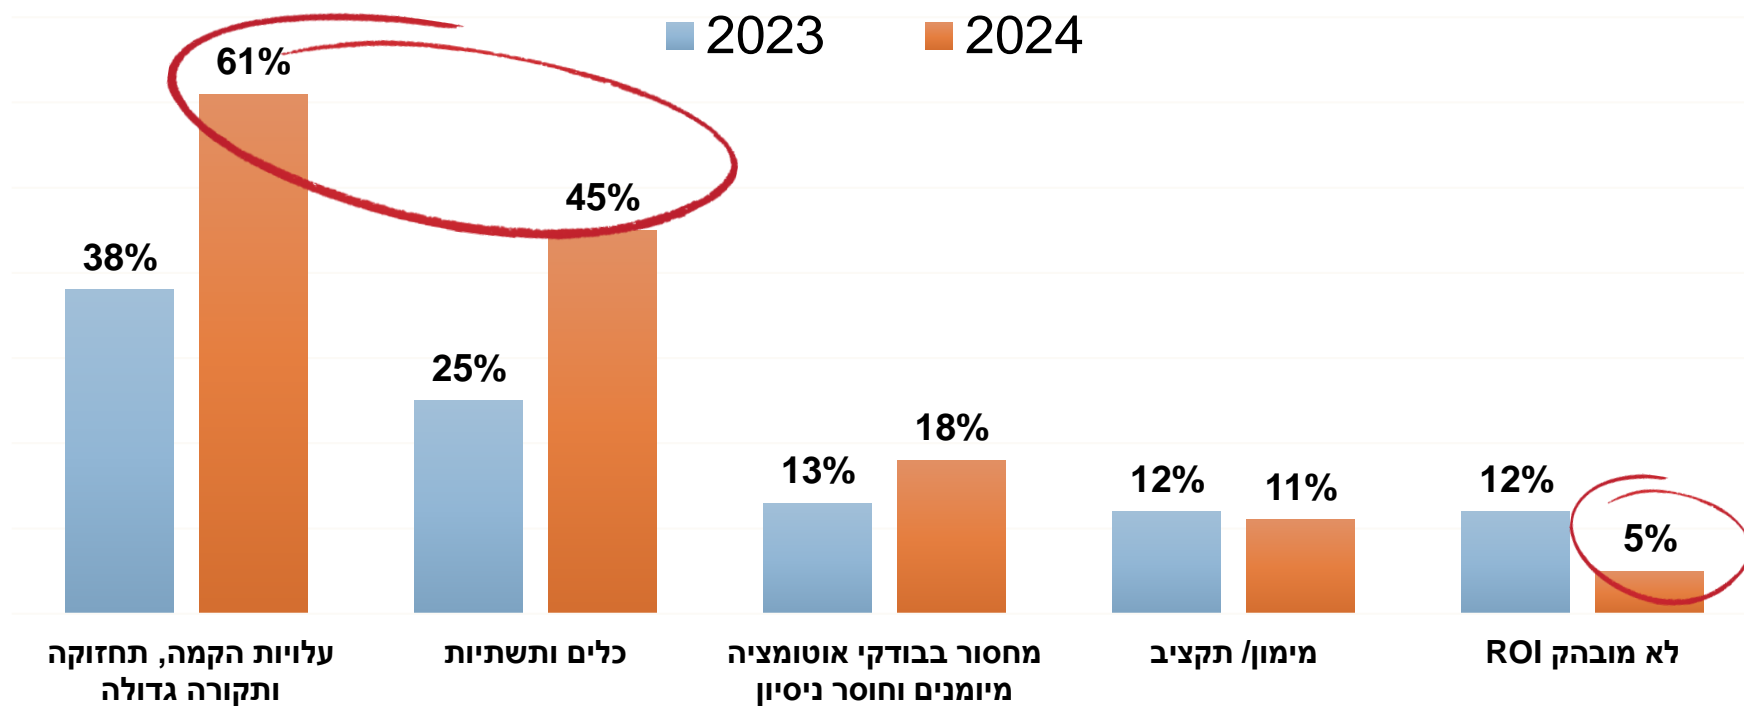

# #4

**Everyone understands the need,  
everyone understands that it does not save costs**

**Testing Automation is a “NEW CLOUD” 😊**

## האתגרים הגדולים ביותר בהקמה של בדיקות אוטומטיות בארגון

Source: STKI 2024

# #5

- Heavy upfront investment in testing automation infrastructure
- A lack of qualified automation testers
- Testing automation establishment and maintenance

## **A Need for an Automation Center of Excellence**

## Processes

Including implementation and change mng

## Skills

Forecasting, including training guidance and sourcing

## Use Cases Identification and Prioritization

Oversee projects, leverage synergy

## Governance

Define success criteria, KPIs for projects

# CoE

Center of Excellence

## Literacy

Set an unify organizational language on a specified area

## Standards

Best practices, guidelines and methodologies

## Architecture

Standardize and organize IT infrastructure to aligns with business goals

## Tools

Tools standardization

CoE is an enabler, not a controller or a doer itself

# The next big thing: The Use of **AI** in Testing Automation

Just for that let's start collecting **DATA**

# האם כבר נעשה בארגון שימוש ב AI לטובת הבדיקות?

Source: STKI 2024

# I RECOMMEND

---

- The 1<sup>st</sup> step to true CI/CD integrated test automation is to assess your tests. What do you have, and what do you need?
- Don't try to automate everything
- Invest in **low-code and AI-based tools**
- Start your journey to Testing Automation CoE establishment with **expert consulting**

# WHY

---

- It all depends on what you are trying to achieve: Are you short on UI tests? Are there separate mobile tests and web tests? Can you test a backend API directly, without an obfuscating UI layer?
- Focus on the most important bits of the app/ process
- LCDP **don't** require a strong background in development
- **Testing Automation requires knowledge & skills that orgs don't have** – leading vendors offer a quick free assessment, mentoring for QA mngr

# A word to Vendors that deliver QA:

- Quite a few orgs have started their journey to TESTING AUTOMATION, but even the most leading among them - **not even close to being HIGH Performers:**

**Trusted Adviser:** There is a lot of room for consulting, guidance, people sourcing and training, CoE establishment, etc.

- There is a **growing demand for TESTING AUTOMATION tools** and there are many tools in the organization and on the market - **HELP NEEDED**
- There is no doubt that there is a lot of challenges in recruitment and retention in TESTING AUTOMATION – but **they're very different challenges**

Therefore, there is room for **a large variety of managed services models**

An aerial photograph of a complex multi-level highway interchange. The image shows several elevated roadways with multiple lanes, filled with cars and buses. The roads curve and cross each other at various levels. In the background, there are tall apartment buildings, a large parking lot filled with cars, and a green soccer field. The overall scene is a busy urban environment.

# **Business Process Automation and Re-Engineering**

# #1

## RPA goes AI

# Current State of RPA

All have implemented RPA

Most Israeli enterprises (87%) have already implemented RPAs

It doesn't always work well

- Most implementations didn't deal with process optimization– RPA as a quick win to a specific problem
- 69% experienced broken bots at least once per week

Automation is the ONLY option. Continue to invest

- 84% are planning to invest more into RPA v2.0 within the next year

# Technology-organizational model

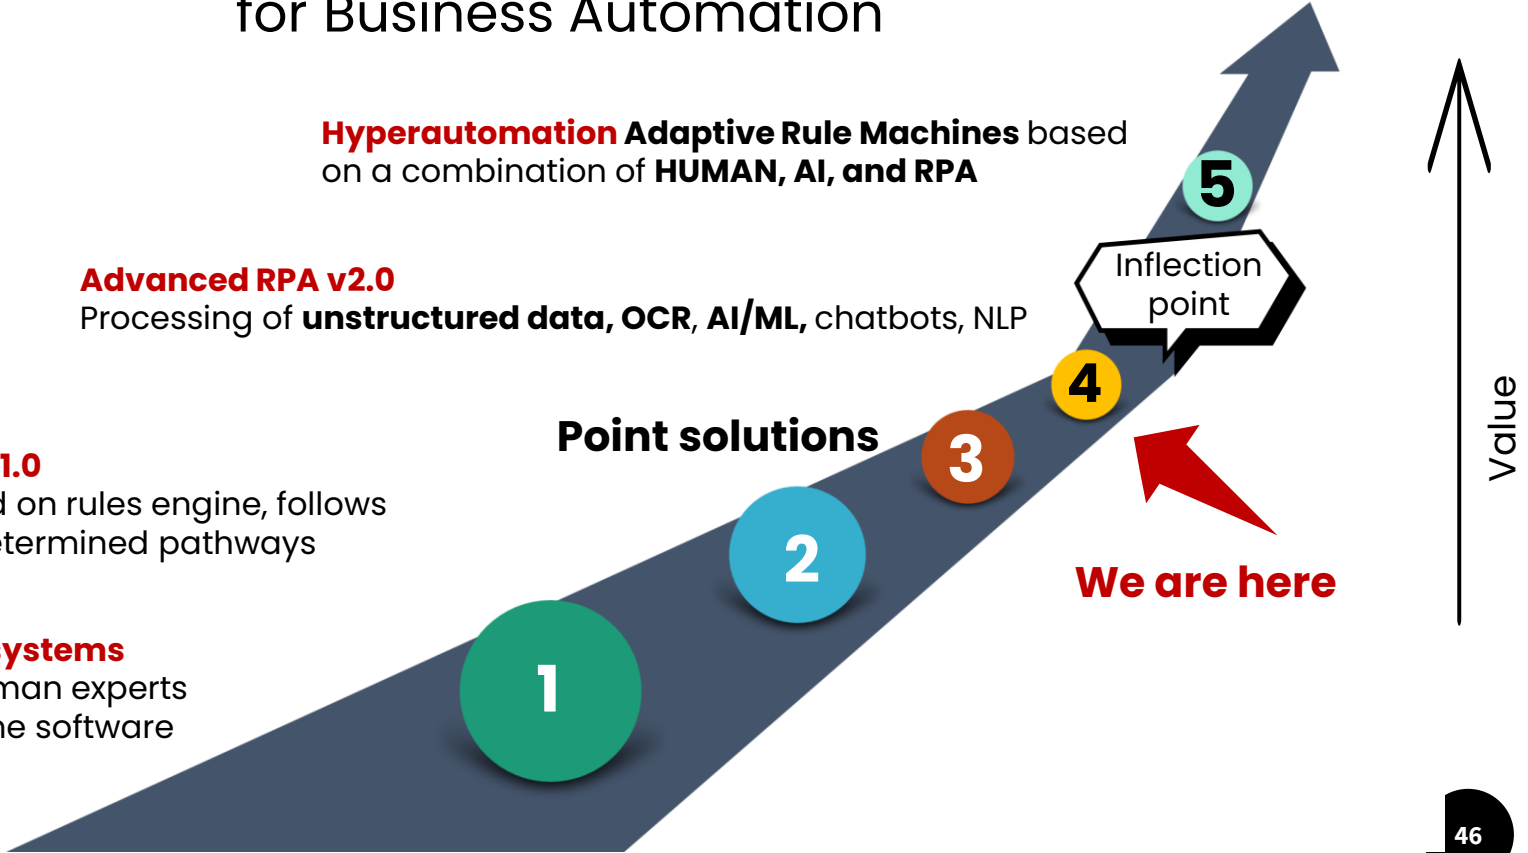

for Business Automation

**Hyperautomation Adaptive Rule Machines** based on a combination of **HUMAN, AI, and RPA**

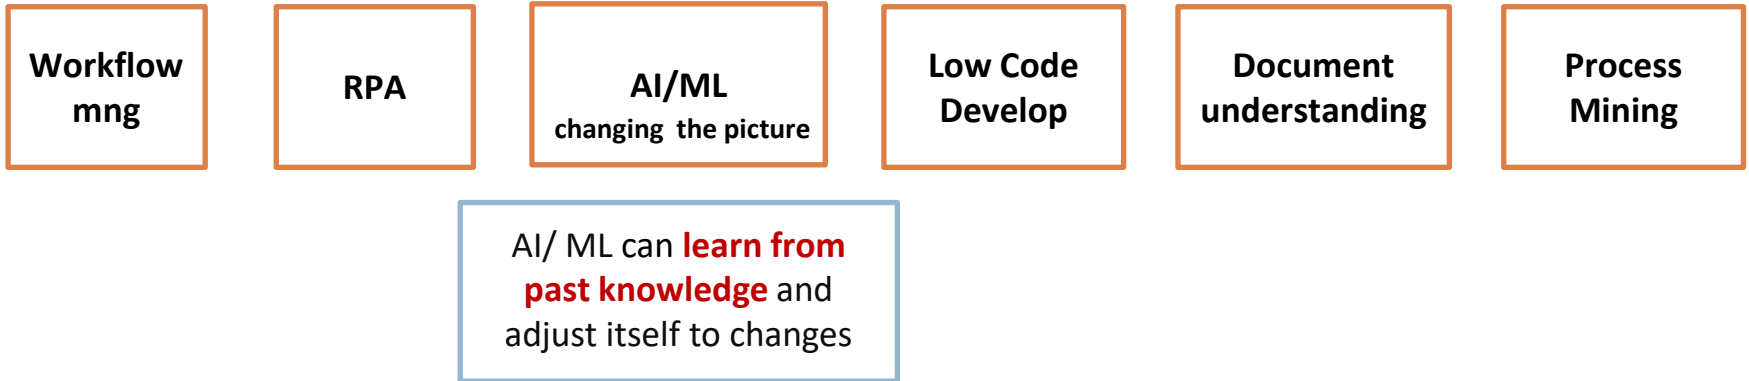

**Advanced RPA v2.0**  
Processing of **unstructured data, OCR, AI/ML, chatbots, NLP**

**RPA v1.0**  
Based on rules engine, follows predetermined pathways

**Rules-based systems**  
Defined by human experts while writing the software

# RPA v2.0 – Business Automation

**We should work on our process,  
not the outcome of our processes**

# #2

## End-to-end process automation

# But what is our process?

Usually, 2 completely different pictures

What we think

IDEAL  
PROCESS

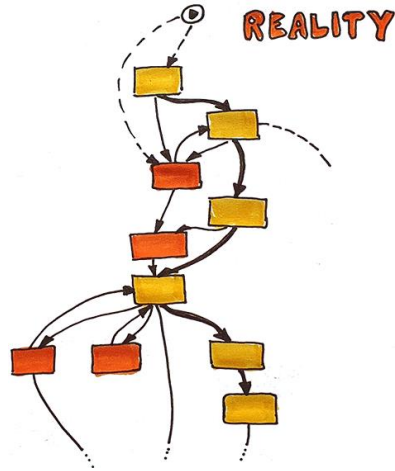

How it's actually done

REALITY

# Process Mining

Combination of process mining (Data obtained from event logs & transactional DBs) and real-time analytics capabilities

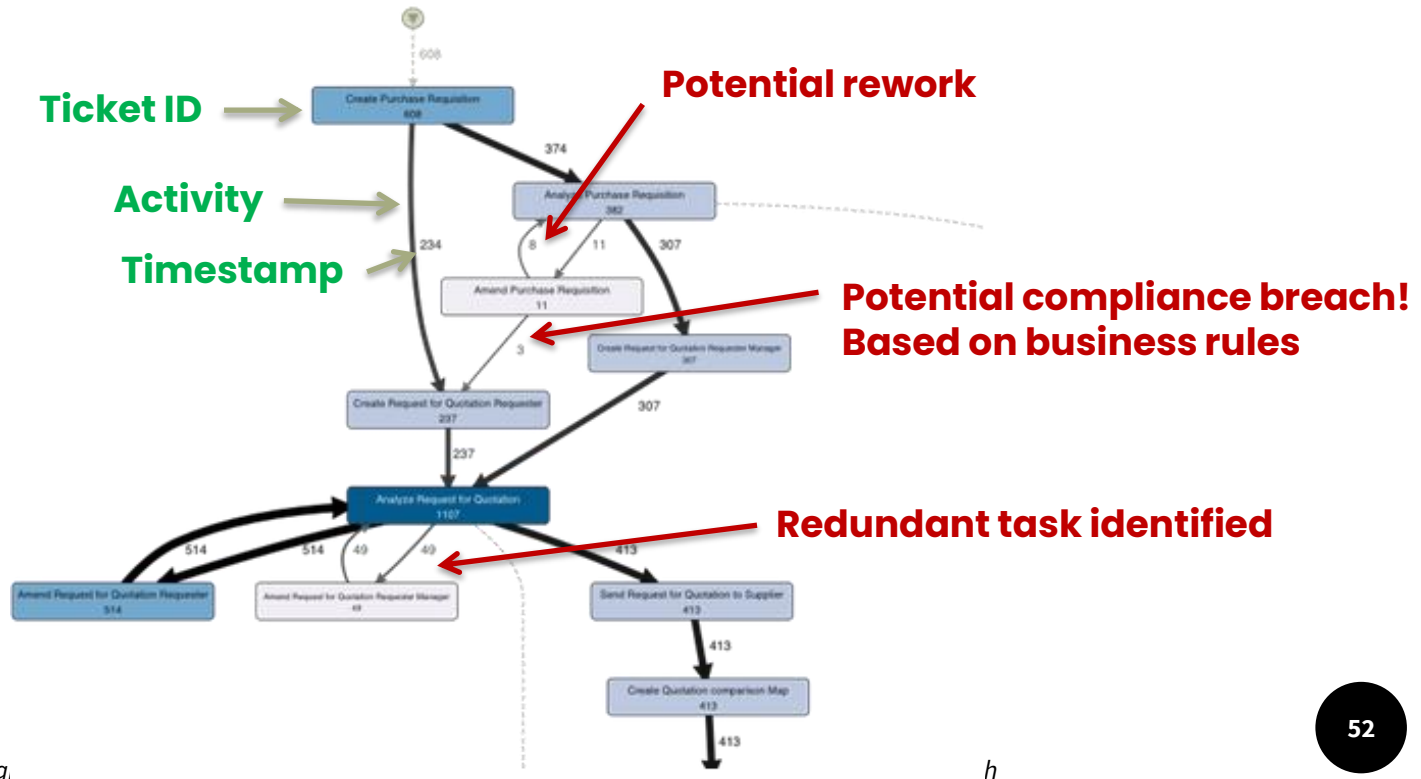

One can detect process deviations, and bottlenecks and also generate inferences for recommendations and prediction

# Digital traces in IT systems

- IT systems process data
- Information about previous events and activities are gathered in (event) logs - these are the digital traces
- We usually only use this data to analyze errors or track activities
- That's quite a lot of data that is rarely used!
- Most companies have mountains of unused data they could **mine for insights**.

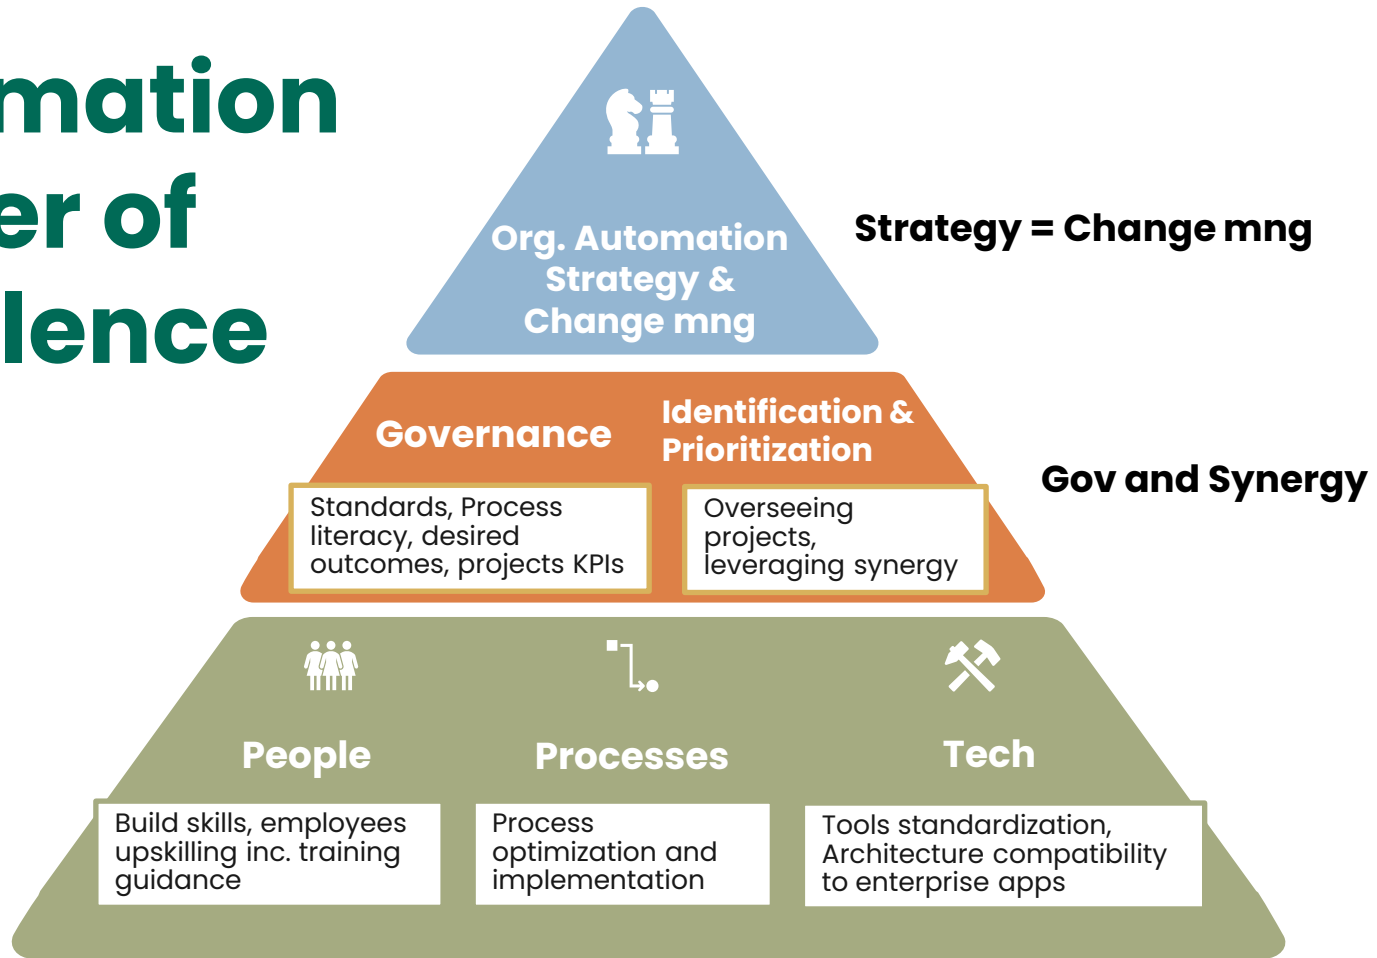

# You need to understand the process before you can optimize it

# #3

## Automation CoE

# Automation Center of Excellence

# I RECOMMEND

---

# WHY

---

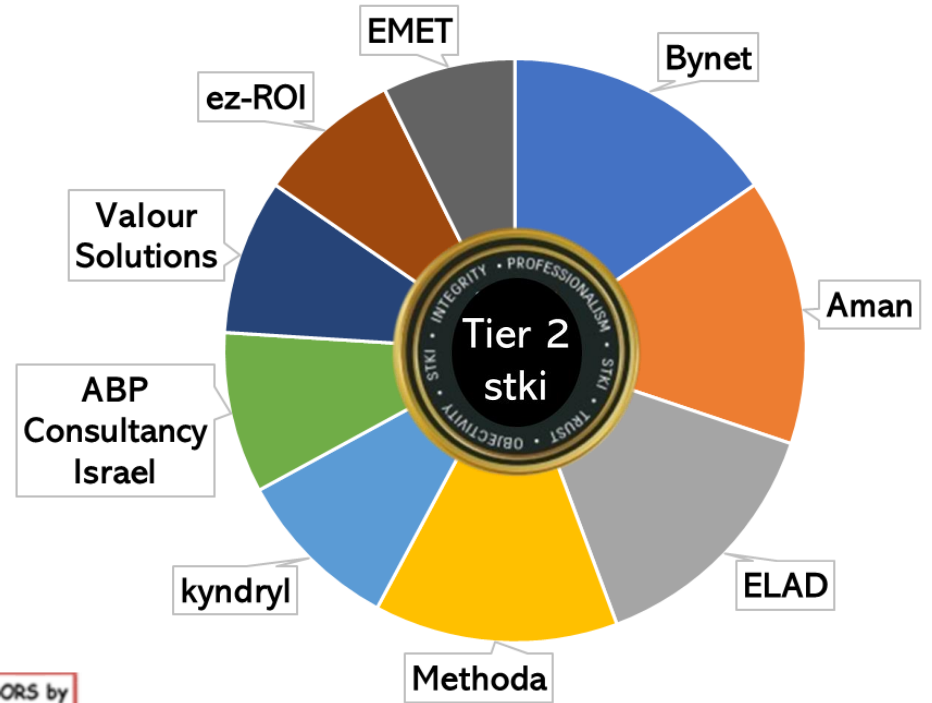

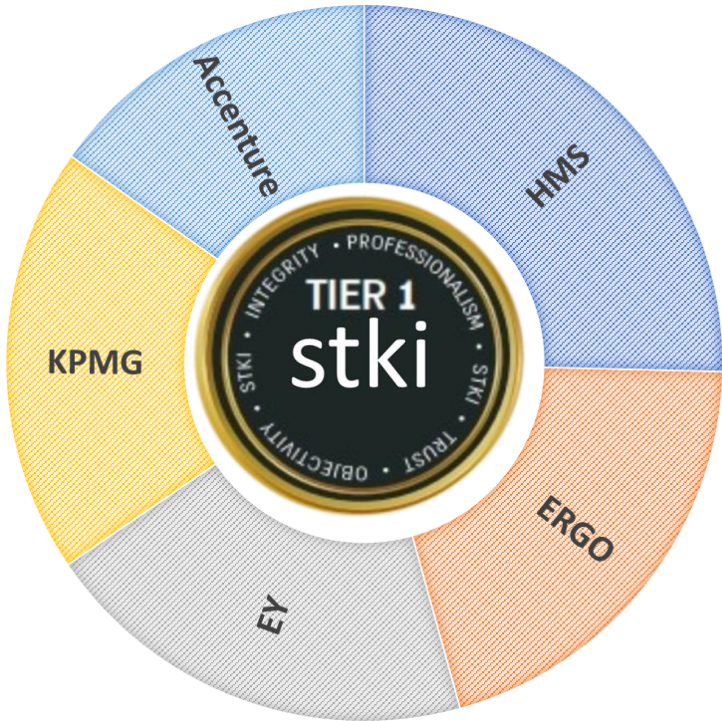

- Start by discovering & revealing the truth of the actual process
  - Start the org automation journey with the Industrial Engineering consulting
  - Do the automation with Process Discovery
- Most orgs **can't tell what their actual processes** are. Process understanding is based on shadowing & standard interview-style discussions with users. Most of them provide an ideal answer, not what they actually do
  - In the era of ERP, most enterprises have lost their Process Analyst Skills. Most vendors prefer to start implementation, instead of process optimization
  - Process discovery takes the blindfolds off IT & mngt to see how their processes are actually working

# Automation & Process Consulting

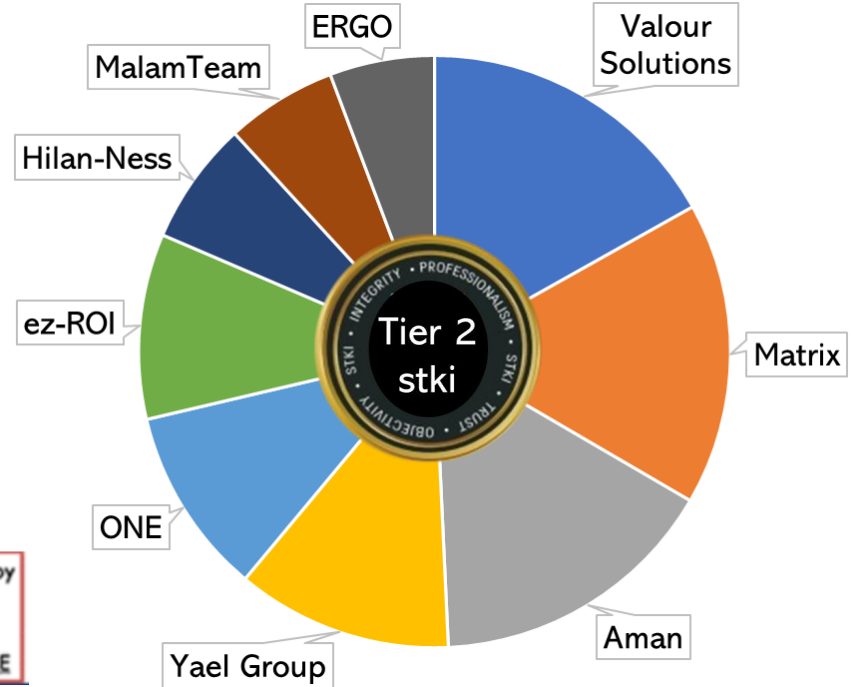

value added services market

We rank VENDORS by  
REVENUE  
and  
CLIENT MINDSHARE

# Automation tools (RPA, OCR) Implementations

We rank VENDORS by  
REVENUE  
and  
CLIENT MINDSHARE

# Thank you

for your help in conducting this research
